Module 3.2.P Drug Product: Halvorex (ivaltrine) 50 mg tablets

Applicant: Halden Therapeutics, Inc. Product code: HT-101

This section is provided in accordance with the Common Technical Document format. Information herein is confidential and proprietary to Halden Therapeutics, Inc.. Batch records referenced in this section are available for inspection at the manufacturing site.

3.2.P.1 Description and Composition of the Drug Product

Halvorex (ivaltrine) 50 mg tablets are manufactured using the excipients listed below. All excipients comply with the referenced compendial monographs.

Excipient	Grade	Function
Microcrystalline cellulose	Avicel PH-102, NF	Filler/binder
Croscarmellose sodium	Ac-Di-Sol, NF	Disintegrant
Magnesium stearate	NF, vegetable source	Lubricant

3.2.P.2 Pharmaceutical Development

3.2.P.2.1.2 Excipients

Avicel PH-102 was selected over PH-101 because its larger median particle size (approximately 100 um) provides superior powder flow for direct compression at commercial press speeds; three engineering batches showed weight variation below 1.5% RSD.

The selection of all excipients and their grades followed a science- and risk-based approach. The following guidance was considered: ICH Q8(R2) Pharmaceutical Development; USP-NF monograph for Microcrystalline Cellulose.

3.2.P.4 Control of Excipients

Excipients are tested on receipt against the current compendial monograph and the applicant's internal excipient specification. Certificates of analysis from qualified suppliers are reviewed by Quality Assurance prior to release.

3.2.P.5 Control of Drug Product

Release testing includes appearance, identification by HPLC, assay (95.0-105.0%), related substances, dissolution and uniformity of dosage units.
