Module 3.2.P Drug Product: Brexidol (tamorastat) 25 mg capsules

Applicant: Halden Therapeutics, Inc. Product code: HT-317

This section is provided in accordance with the Common Technical Document format. Information herein is confidential and proprietary to Halden Therapeutics, Inc.. Batch records referenced in this section are available for inspection at the manufacturing site.

3.2.P.1 Description and Composition of the Drug Product

Brexidol (tamorastat) 25 mg capsules are manufactured using the excipients listed below. All excipients comply with the referenced compendial monographs.

Excipient	Grade	Function
Pregelatinized starch	Starch 1500, NF	Filler/disintegrant
Colloidal silicon dioxide	Aerosil 200, NF	Glidant
Magnesium stearate	NF, vegetable source	Lubricant

3.2.P.2 Pharmaceutical Development

3.2.P.2.1.2 Excipients

Starch 1500 was selected because its partial pregelatinization provides both filling and disintegration function in a single excipient, minimizing the number of components in the capsule fill. Dissolution exceeded 85% in 30 minutes for all registration batches.

The selection of all excipients and their grades followed a science- and risk-based approach. The following guidance was considered: ICH Q8(R2) Pharmaceutical Development; Ph. Eur. monograph 1267 Pregelatinised Starch.

3.2.P.4 Control of Excipients

Excipients are tested on receipt against the current compendial monograph and the applicant's internal excipient specification. Certificates of analysis from qualified suppliers are reviewed by Quality Assurance prior to release.

3.2.P.5 Control of Drug Product

Release testing includes appearance, identification by HPLC, assay (95.0-105.0%), related substances, dissolution and uniformity of dosage units.
