Module 3.2.P Drug Product: Nurivan (olcetrine) 100 mg tablets

Applicant: Halden Therapeutics, Inc. Product code: HT-422

This section is provided in accordance with the Common Technical Document format. Information herein is confidential and proprietary to Halden Therapeutics, Inc.. Batch records referenced in this section are available for inspection at the manufacturing site.

3.2.P.1 Description and Composition of the Drug Product

Nurivan (olcetrine) 100 mg tablets are manufactured using the excipients listed below. All excipients comply with the referenced compendial monographs.

Excipient	Grade	Function
Lactose monohydrate	Ph. Eur., milled grade 200 mesh	Filler
Povidone	K30, Ph. Eur.	Binder
Sodium stearyl fumarate	PRUV, NF	Lubricant

3.2.P.2 Pharmaceutical Development

3.2.P.2.1.2 Excipients

Milled lactose monohydrate (200 mesh) was used because it is the grade qualified at the European contract manufacturer and is compatible with the aqueous granulation process. Compatibility studies at 40C/75% RH for 3 months showed no increase in degradants.

The selection of all excipients and their grades followed a science- and risk-based approach. The following guidance was considered: ICH Q8(R2) Pharmaceutical Development; EMA Guideline on Excipients in the Dossier for Application for Marketing Authorisation of a Medicinal Product.

3.2.P.4 Control of Excipients

Excipients are tested on receipt against the current compendial monograph and the applicant's internal excipient specification. Certificates of analysis from qualified suppliers are reviewed by Quality Assurance prior to release.

3.2.P.5 Control of Drug Product

Release testing includes appearance, identification by HPLC, assay (95.0-105.0%), related substances, dissolution and uniformity of dosage units.
