Module 3.2.P Drug Product: Pellira (dunaxitib) 20 mg/mL oral solution

Applicant: Halden Therapeutics, Inc. Product code: HT-509

This section is provided in accordance with the Common Technical Document format. Information herein is confidential and proprietary to Halden Therapeutics, Inc.. Batch records referenced in this section are available for inspection at the manufacturing site.

3.2.P.1 Description and Composition of the Drug Product

Pellira (dunaxitib) 20 mg/mL oral solution are manufactured using the excipients listed below. All excipients comply with the referenced compendial monographs.

Excipient	Grade	Function
Polysorbate 80	Super Refined, low peroxide, NF	Solubilizer
Sucralose	NF	Sweetener
Sodium benzoate	NF	Preservative

3.2.P.2 Pharmaceutical Development

3.2.P.2.1.2 Excipients

A low-peroxide grade of polysorbate 80 was required because dunaxitib is susceptible to oxidative degradation; standard grade lots produced oxidative degradant D-3 above the 0.2% identification threshold at 6 months accelerated.

The selection of all excipients and their grades followed a science- and risk-based approach. The following guidance was considered: ICH Q8(R2) Pharmaceutical Development; ICH Q3B(R2) Impurities in New Drug Products.

3.2.P.4 Control of Excipients

Excipients are tested on receipt against the current compendial monograph and the applicant's internal excipient specification. Certificates of analysis from qualified suppliers are reviewed by Quality Assurance prior to release.

3.2.P.5 Control of Drug Product

Release testing includes appearance, identification by HPLC, assay (95.0-105.0%), related substances, dissolution and uniformity of dosage units.
