Stability Protocol SP-101-02

Product: HT-101 Sponsor: Halden Therapeutics, Inc.

This protocol is designed in accordance with ICH Q1A(R2) Stability Testing of New Drug Substances and Products.

1. Storage Conditions

Samples will be stored at 25C/60% RH (long-term) and 40C/75% RH (accelerated).

2. Testing Timepoints

Samples will be pulled at 0, 3, 6, 9, 12, 18, 24, 36 months (long-term); 0, 3, 6 months (accelerated).

3. Acceptance Criteria

Assay 95.0-105.0%; any unspecified degradant NMT 0.2%; total degradants NMT 1.0%; dissolution Q=80% at 30 minutes.

4. Deviations

Deviation DEV-2025-118: the 9-month long-term pull was performed 6 days late due to chamber maintenance; impact assessed as none.

5. Bracketing and Matrixing

Bracketing is applied to the 30-count and 500-count HDPE bottle presentations; the 90-count presentation is not tested because container closure and fill ratio fall within the bracket.

6. Post-Approval Stability Commitment

The first three commercial batches will be placed on long-term stability post-approval and one batch per year thereafter.
